

119TH CONGRESS  
POLICY PLATFORM

AMERICA IS  
BUILT BY  
BONDS

# Above all else...

Congress and the administration should defend affordable finance options for our communities and reject efforts to eliminate or reduce the federal tax exemption on municipal bond interest. Holders do not pay federal income taxes on interest paid on qualified municipal bonds, which reduces the interest costs for state and local borrowers. Limiting or eliminating the tax-exemption on bonds would amount to a federal takeover of local decision-making and rip money from the communities that know their infrastructure needs best. More importantly, any effort to reduce or eliminate the tax exemption would result in increased borrowing costs, forcing state and local governments to either cut back infrastructure investment or raise taxes and rates on American households.

**\$4.1 T**

Size of out-standing market in 2024.

**\$823.9 B**

Estimated nation-wide savings over 2026-2035.

**\$70.9 B**

Saved by community issuers and borrowers in 2023

**210 bp**

Average borrowing rate difference (in basis points) between taxable and tax-exempt municipal bonds in 2023.

**\$6,544.67**

Savings from the tax-exemption per U.S. household over the next 10 years (2026-2035).

# Three Ways to Support Community Finance

Since the first issues in the early 1800s, municipal bonds have had a proven track record as an effective tool for state and local governments to finance critical infrastructure. Here are three ways in which federal policymakers can further strengthen community finance.

## 1 Modernize financing options available to our smallest communities.

Banks generally cannot deduct the borrowing costs of holding tax-exempt securities but may deduct up to 80 percent of the carrying costs of securities from “qualified small issuers” that issue less than \$10 million in a calendar year per section 265 of the Internal Revenue Code (IRC). This exemption allows smaller communities to access tax-exempt rates more easily through bank placements and reduces their financing costs. These small issuers typically save between an estimated 25 – 40 basis points per transaction.[i] The current \$10 million threshold was set in 1986 and is no longer enough to finance most projects even in smaller communities. By raising the threshold, indexing it to inflation, and applying it to the borrower instead of the issuer, Congress and the administration can help small communities, as well as nonprofits, reduce borrowing costs for critical infrastructure projects.

## 2 Expand financing options for innovative and critical projects.

Many capital projects with a private use provide essential public benefit, such as airports, seaports, waste disposal facilities, housing, 501(c)(3) institutions, and many more. A private activity bond (PAB) is a bond issued to finance a facility that includes some private use, through ownership, management agreements, a lease, or another economic interest in the facility. The Internal Revenue Code (IRC) provides specific categories of PABs that may qualify to be issued on a tax-exempt basis due to the public benefit they offer. In certain instances, the volume of qualified PABs a state is allowed to issue each year is capped. States frequently reach their volume cap well before the end of the year—limiting access to financing opportunities for innovative and critical infrastructure projects and public-private partnerships. By expanding certain categories of PABs and alleviating state volume caps, Congress and the administration can leverage greater investment in national infrastructure projects.

## 3 Allow our communities to once again refinance at lower rates.

For decades, state and local governments were able to refinance outstanding debt by issuing a tax-exempt advance refunding bond to pay off another previously issued bond. Typically, the new refunding would allow the issuer to achieve a lower interest rate and generate savings to the issuer and taxpayer. Between 2007 and 2017, issuers used advance refundings to save more than \$18 billion.[ii] While issuers can still use current refunding bonds within 90 days of the call date, reallowing issuers to issue tax-exempt advance refunding bonds beyond that window would permit state and local governments to take advantage of favorable interest rate environments, save tax dollars, and reinvest savings in additional infrastructure.
